

Mariette Andersson is a Researcher and Deputy Head of Department at Swedish University of Agricultural Sciences, Department of Plant Breeding. Her main research interest is to design plants to produce tailor made compounds with health- and/or environmental benefits, by using genome editing or genetic modification. Her work is centred on carbon allocation, especially starch, but oil, sugar and protein are also of research interest. Prior the current position, she was working 12 years in the plant biotech industry, focusing on the development of different potato traits and characterisation of GM elite events for deregulation in EU. Mariette received her PhD in Biochemistry from Lund University 2004.
